

6. Maximal Square (Leetcode-221)

Problem Statement:

Given an $m \times n$ binary matrix filled with 0's and 1's, find the largest square containing only 1's and return its area.

Input: matrix =

`[["1","0","1","0","0"],["1","0","1","1","1"],["1","1","1","1","1"],["1","0","0","1","0"]]`

Output: 4

Row

	0	1	2	3	4	Col
0	1	0	1	0	0	
1	1	0	1	1	1	
2	1	1	1	1	1	
3	1	0	0	1	0	

(Note: In the original image, a 2x2 square of 1s is highlighted in red at rows 1-2, cols 2-3. A larger 3x3 square of 1s is highlighted in green at rows 1-3, cols 2-4.)

Ans

$$\min(R_i, D_i, D_o) + 1$$

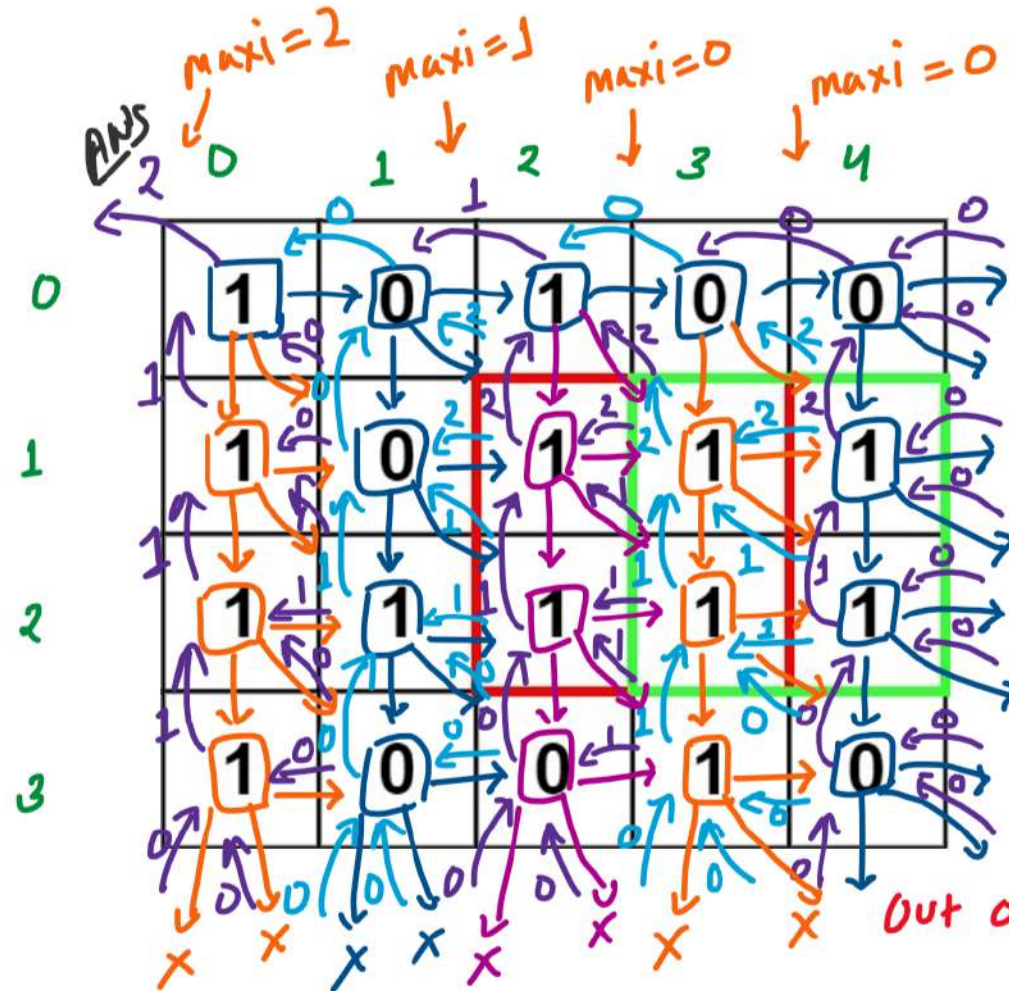

maxi

$$\max(\text{Ans}, \text{maxi})$$

Area

$$\text{maxi} * \text{maxi}$$

Row = 5
 Col = 4
 $\text{maxi} = \max(1, 2)$
 $\text{maxi} = \max(\text{maxi}, \text{Ans})$
 $= 2$
 Area = 2×2
 $= 4$
Output

Out of Bound

Base Case
 $(i \geq \text{row})$
 return 0

ANS
 $\min(R_i, D_i, D_0) + 1$

Base Case
 $(j \geq \text{col})$
 return 0

$$\text{Ans} = \boxed{1} + \text{Min}(2, 1, 2)$$

$$= 1 + 1$$

$$= 2$$

$$\text{Area} = 4$$

Right square
but
no zero
contained

$$\text{Ans} = \boxed{1} + \text{Max}(2, 1, 2)$$

$$= \boxed{1} + 2$$

$$= 3$$

$$\text{Area} = 9$$

X Wrong square
because of
zero contained

```

class Solution {
public:
    int solve(vector<vector<char>>& matrix, int i, int j, int row,
int col, int& maxi){
        // Base case
        if(i >= row || j >= col){
            return 0;
        }

        // Explore all three directions
        int right = solve(matrix, i, j+1, row, col, maxi);
        int diagonal = solve(matrix, i+1, j+1, row, col, maxi);
        int down = solve(matrix, i+1, j, row, col, maxi);

        // Check can we build square form current position
        if(matrix[i][j] == '1'){
            int ans = 1 + min(right, min(diagonal, down));
            maxi = max(maxi, ans);
            return ans;
        }
        else{
            // agar matrix[i][j] == 0 hai to ans hi zero hoga
            return 0;
        }
    }
    int maximalSquare(vector<vector<char>>& matrix) {
